PRIORITY SCORE

Scored between 0 - 1000

"FIXED IN" AVAILABLE

- Yes 0
- No 41

COMPUTED FIXABILITY

- Fixable 0
- Partially fixable 0
- No supported fix 41

EXPLOIT MATURITY

- Mature 0
- Proof of concept 0
- No known exploit 41

M systemd/libsystemd0 - Improper Access Control

VULNERABILITY | CWE-284 | CVE-2026-4105 | CVSS 6.7 MEDIUM | SNYK-DEBIAN13-SYSTEMD-15656985

SCORE **300**

Introduced through systemd/libsystemd0@257.9-1~deb13u1 and systemd/libudev1@257.9-1~deb13u1

Exploit maturity NO KNOWN EXPLOIT

Detailed paths

- **Introduced through:** python@3.13-slim › systemd/libsystemd0@257.9-1~deb13u1
  Fix: No remediation path available.
- **Introduced through:** python@3.13-slim › systemd/libudev1@257.9-1~deb13u1
  Fix: No remediation path available.

Security information

Factors contributing to the scoring:

- **Snyk**: CVSS 6.7 - Medium Severity
- **NVD**: CVSS v3.1 6.7 - Medium Severity
- **Debian Security Rating:** Not yet assigned

Why are the scores different? Learn how Snyk evaluates vulnerability scores

Justification Snyk :

Cette vulnérabilité ne vient pas de notre code, mais d'un composant technique utilisé par l'image Docker. Dans notre cas, elle n'a pas d'impact car notre microservice n'utilise pas cette partie du système et n'a pas les accès nécessaires pour que ce problème puisse être exploité.

Justification SonarCloud :

Issue : Sonar indique que le paramètre "`response_model`"est inutile, car le type de retour est déjà défini dans la fonction. Cela crée une répétition inutile dans le code.

correction : J'ai supprimé "`response_model`"car il faisait doublon avec le type de retour déjà indiqué dans la fonction. Le code devient plus simple, plus lisible et évite les répétitions inutiles.
